

LOOKING AFTER YOUR PRODUCT

- ☆ When you receive your print, take lots of care when unpacking it. If the print comes in a tube, it will have been rolled in biodegradable 'plastic' to protect it. Gently pull the edge of the wrapping to remove the print from the tube. Try to minimise handling the print until you're ready to display it.
- ☆ Keep your print out of direct sunlight. The sun will fade the colours in time.
- ☆ The print should NOT be kept anywhere that is damp.
- ☆ If you order a framed print, then always hold the frame by the picture string on the reverse, rather than the edges of the frame.
- ☆ The frames I use have glass rather than acrylic plastic so take lots of care when handling them.
- ☆ If you are framing the print yourself, always make sure you have clean dry hands and a flat surface. Try not to handle the print too much. Make sure there are no flecks of dust on the glass.
