

## PACKAGING

- ☆ Where possible, I use eco friendly packaging. The cellophane is made from potato starch and will biodegrade in the industrial composts. Please make sure you dispose of the cellophane in your kitchen caddy. I use brown paper and brown tape, I even have now found a 'FRAGILE' tape made from paper.
- ☆ I try to reuse any packaging sent to me, this means your order may arrive in a bag with other branding on it.
- ☆ I do not buy bubble wrap but I do use pre used pieces given to me.
- ☆ A4 and A3 prints are wrapped in biodegradable cellophane and popped into an envelope with backing board. A2 prints are rolled up in biodegradable cellophane and popped into a tube.
- ☆ Mounted prints are wrapped in biodegradable cellophane, secured onto backing board and wrapped in brown paper where possible.
- ☆ Framed prints are sent with a piece of MDF board to protect the glass and wrapped as carefully to protect the frame in transit.
